

point		Review	
premium too expensive	ads	I really like Spotify, I don't have problem with ads but shuffle and only 6 skips per hour is sooooo annoying! I neither want to pay for Spotify premium nor switch to another app, and this makes Spotify really hard to use.	
premium too expensive	ads	Too much and too long ads	
premium too expensive	ads	I like it I still use and all but the ads bro so many ads like I pick a play list and literally over 6 ads go on then when it's say "enjoy the next 30 minutes without ads" its lying cuz and ad pops up when it hasn't even been 30 minutes but I like how it's set up and all so ima still use but bro the ads are over board	
premium too expensive	ads	This is a good app but the main downside to it is the point that we can't listen to our playlists and songs in the order we want, PC and Mac is the exception which allows all of the above but still have ads.	
premium too expensive	ads	This is a good app for listening music. I have playlists I've made as profile Cheshel345 with probably thousands of songs. I have few complaints other than the fact that premium is just expensive enough that as a teenager with not much income I can't afford to spend that much. Unfortunately you are pushing a political agenda with ads that I am sick of. Every time I listen anymore every single ad is for pro gay junk. I don't want ads for that. It's gotten so bad I can't even use this app anymore	
premium too expensive	ads	It's pretty cool I like it but too much ads and lyrics in songs are wrong but still like it	
premium too expensive	ads	I enjoy listening to my music in Spotify but it's kind of dumb to listen to your songs and get an ad interruption during a song other wise I would've rate a 5 but I give you 3 rating it could be better	
software problem	ads	This app is great in so many ways. But Jesus does it glitch. There's so many loading issues that have been going on for months, even when you're offline but have downloaded music, it loads very slow or doesn't at all. Extremely annoying when you pay for your plan and it doesn't even function correctly. Please fix the bugs!!!	
software problem	ads	Recently I've been having issues with my mobile app, sometimes a song will play but the profile of that song will be different from the song, it's laggy. I normally fixed the issue by restarting my phone or updating my spotify app. My most annoying issue though is that I can't even open my mobile app anymore, it just leaves me on the black loading splash screen page with the green logo but never loads. It kinda sucks right now considering I pay for premium. I have a Samsung Galaxy Note 10	
software problem	ads	I've been using Spotify since I first started using a phone. I can bear with the ads and everything but for some reason recently the music would just stop when I play from the beginning again. It happened a couple times and I thought that it's okay but it's been happening so much recently its really getting on my nerves	
add feature	app	Please put an option to allow us to exit out of the playlist when we are not listening to music. Its extremely frustrating that all I can do is pause the music. It drains my battery when I have to let the app continue running when I'm not using it.	
add feature	app	To tell you the truth guys I preferred Spotify Status it's easier to customize playlists based on the individual artists. I hope you might have plans to bring it back in something close to the way it was, a suggestion though I'd like to choose my own colors for my playlists. I hope I'm not the only one who wants to see it brought back, but if there's not enough people using an app you guys gotta do what you gotta do to get it. Thanks for listening.	
bad app	app	Computer version is much better and has a repeating option. On phone app it doesn't work. You can pick the song you wanna hear instead of random, unlike the app	
bad app	app	Crashes on android whenever I go full screen. I thought this was a mature app? Where is quality control?	
bad app	app	broken app, no more 30 mins of uninterrupted listening	
bad app	app	This last update completely destroyed the app. Why do you keep adding pointless things that aren't needed? It's breaking the foundation of the app. When I play music now, it doesn't show up at the bottom of the screen or on my lock screen, it's like I never even played the song. And then after 10 minutes it just cuts out for no reason and I have to go back to the app. I can't even listen to music for no reason. Sort it out	
bad app	app	Nice app, but when your free trial is over, the quality really goes down, if I search a song it gives me some random person's playlist, and I can't skip to the song I like. Nice app, but only the premium version.	
bad app	app	Overall the app is pretty good except that it's a bit confusing on a phone rather than on a laptop. I also don't like how on a phone you can't choose what song you want to play from your playlist and you only get to hear a snippet of the song. Please change this because it comes to a very big disadvantage for people who do not wish to purchase premium.	
bad app	app	This is a very good service for laptops and desktops but the new updates are totally ruining the experience for mobile users and making it horrible. There used to be a 'kebab menu' (three dots) icon whenever you searched a song which allowed you to add it to a playlist directly. Now you must play the song before adding it to a playlist because the three dots disappeared. Also mobile users don't have the option of rearranging the songs on a playlist. Please resolve these issues ASAP.	
good review	app	It was a ok app didn't have it that long was use to Pandora music playing guess I will try it again some day	
good review	app	Edit: The SD Card trick from online forum works. App is working as intended. Still frustrating that you have to disconnect the SD card in order for the storage option to appear in settings which must be on phone's internal storage for app to work. Mobile app does not work. I cannot play music or podcasts. I cannot view artists pages, and every single playlist shows as empty even though I can see them on desktop and browser.	
premium too expensive	app	The app requires updates too frequently. For the cost it should be more reliable	
premium too expensive	app	This app is a must but the only thing I don't like it because there's too much of ads. After playing one or two music, there you can hear the sound of the ads	
premium too expensive	app	Really a superb app but I give only 3 stars because there are one advertisement at a single song so kindly avoid it	
software problem	app	Love the app, have had it for years, but I just got a new phone (Galaxy S22), and since then when I use Spotify, my queue doesn't pop up when I start listening, I can't pause or go back and forward in any podcast or song/playlist. Obviously this is annoying if you want to check how long is left on a podcast or song, or missed something that was said now can't hear again without starting over, or worse needing to pause for a variety of reasons. Please fix	
software problem	app	Love this app, however there is a bug where the player is not showing and its becoming really annoying.	
software problem	app	Following the feedback from other premium users - the app was working perfectly fine until a few months ago. Now podcasts and music pause without obvious reason, and some of the buttons disappear randomly. It's really frustrating.	
software problem	app	I use the app for podcasts mostly, but it keeps stopping on its own and part where I can pause and rewind is not even coming up, so pause I have to close the app. When it works, it is a good app.	
software problem	app	Worst appnsi ever used having 2gb of mobile data but still can't access any song	
software problem	app	It did work at first then after a bit it started to play up I tried unstalling it and installing it again and again and it still wouldn't work I really enjoy the app its just playing up so I just stopped using it	
software problem	app	Recently the app just seems to randomly stop and start playback. Often I have to restart the app because none of the playback tools work (it seems to be stuck on playing something) and this playback continues across everything else.	
software problem	app	My player stopped working with the app I play a podcast and I stopped please fix asap	
software problem	app	Spotify app has been kept abruptly freezing and unstable in my One plus 9R device. Requesting team to look into the same. It's more gress because of the recent OOS update by one plus	
software problem	app	Why can't I use the app for a few days now? I tried uninstalling installing. Even rebooting my phone and yet nothing happens. I need to stream.	
software problem	app	Great app full of songs I like and new ones but tired of being double charged for the premium package about to uninstall	
software problem	app	I pay for premium and lately its been very aggressive about pausing my music whenever on wifi or data. Its been happening a lot of people ive talked to as well. Please fix it	
software problem	app	I love this app and I'm freaking out because I accidentally logged myself out of my account and when I went back on the app it just have spotify appnsi in middle of screen doesn't do anything... Ive uninstalledthe app 2 times and still nothing...	
software problem	app	Love the app, but somehow now it doesn't show me audio controls for podcasts. Meaning I can't pause, skip, go back, or whatever. :/	
software problem	app	The player controls sometimes disappear for no reason. App restart forgets what I was playing but fixes the issue.	
software problem	app	Still extremely slow when changing storage to external sd card. I'm convinced this is done on purpose, spotify knows of this issue and has done NOTHING to solve it! Over time I have changed sd cards, each being faster in read, write speeds[all samsung brand]. And please add "don't skip" so it will never appear again in my searches or playlists.	
software problem	app	premium user for years. Spotify has always been my fav music & app but I'm thinking about switching. Never used to have any issues. 2 yrs ago I switched to iPhone for the first time - still no problems. Switched back to Samsung a few months ago, the app is almost impossible to use. You can almost never see "now playing" to control your show or music. It randomly pauses your podcast for no reason. & it marks podcasts as played after 1 sec so you can't stop by unplayed. Also a million pop ups.	
software problem	app	Rn I am unable to pause, skip & play music in my spotify playlist. I usually had that bar that allows you to pause, play & skip to the next song when you minimize the spotify app to have music play in the background but its not there anymore. If I play a song from my playlist the next song in that playlist doesn't play for some reason. Or if I want to pause a song that is playing I'd have to pause the app entirely. I have this problem whether I use my earbuds or not. I've never had this problem	
software problem	app	I love the app in general, but lately there's been a lot of glitches. I can't queue anything properly, quick action bar disappears sometimes, I even stops playing on it own. I'm up to date on the updates, restarting the app or my phone doesn't help...	
software problem	app	It's a great app but I'm having an issue trying to log in because the app isn't loading idk. If it's my phone or the app itself	
software problem	app	I love this app, but if feels like it will never improve... sometimes I just glitches and refuses to play and you have to wait and enter again. if you try to listen at the same time with friends there's a delay between when you hear the song and they do... even to this day they haven't brought listening activity to mobile... like just have it as a tab that you can open if you want to... there are so many things they could add, but they just don't... such a shame...	
software problem	app	It's a very good app for music...loved it a lot, but today when I'm trying to open the app it's not working even after reinstalation. It's still not opening. Please fix the glitch	
software problem	app	Love the app, always have. However, it's been nothing but issues recently. The "now playing" info doesn't show. I can't pause or skip music. It also stops randomly and I have to close the app and go back in and press play again to start over the playlist since I can't just continue with no "now playing" bar.	
software problem	app	The app has been VERY glitchy the last 2 days. A developer needs to look at it.	
software problem	app	App is good but had lot of trouble logging in once logged out	
software problem	app	Application isn't working with last	
software problem	crash	The app start to crash very often, at this point it doesn't start anymore.	
software problem	crash	Having streaming trouble with new update. Skipping of audio and app crashes	
software problem	crash	I was using the lite version of the app (I installed it) and I think that lite is better. The lite button and skip are too close to each other, so it dislikes the song instead of skipping it and there is undo option for that u have search it again and also it crashes a lot. My phones literally telling me uninstall it bc of the crashes...And sometimes the player also doesnt work and it doesnt have background player like the lite version...I getting rid of this one, getting the lite version	
add feature	download	Other music apps have an offline feature where it allows you to download some certain music for free but its otherwise here	
bad app	download	PREMIUM BUYERS: READ BA U BUY Guys, the app's awesome. But, 1. There is no way to see all of the songs downloaded to ur phone. U can only see the playlists U've downloaded or partially downloaded. 2.The only way to clear space is to either delete all of ur songs or go playlist by playlist. If a song is on multiple playlists it won't delete. 3.You can't delete individual songs. This review is limited to 500 char. so I'm cut short. And offline mode is broken too. Dev email me for full report.	
bad app	download	Well I loved it at 1st...Then after trouble I had to contact you guys...I sf few times was good then the last few lines I was wondering if the folks I was talking to even had a clue...after being told twice I would have to manually download my whole list again I threatened to Terminate...Then decided to try one more time and was able to get all my songs back with ZERO HELP FROM YOUR TECH SUPPORT...I'm still in the fence about leaving...	
bad app	download	I would have rated it 5 but the lyrics in songs are in Hangeul (Korean) language only I mean english then and I look subscription of a week and it just wont let me see the download option	
software problem	download	I have premium but I still wont let me download songs for some reason	
software problem	downloaded	I can't listen to my DOWNLOADED playlist while I'm offline. So what's the point of this feature? Disappointed...	
premium too expensive	login	Got logged out of my account that still has premium and I don't know what email I used. Got charged 1 - 2x but I got spotify premium for 2 months or something, still kinda annoying. Still have me free premium with the same card.	
software problem	login	This app is good but five I can't sign in	
software problem	login	Can't figure out how to sign in to my family plan and merge both Spotify's	
software problem	login	I don't like how it bugs every once and a while like when I really need it to work. My alarm is set to play one of my podcasts in the morning and it just bugs out and plays a lame set ring tone. I don't like how it makes me log out and log back in for it to work again	
software problem	login	I logged out on my acc but when I tried to open it to log in, it won't open... all I see is the logo	
software problem	offline	When are they going to fix the broken download/offline working of spotify.	
software problem	offline	desent save offline to sd card properly	
premium too expensive	shuffle	Great way to find and listen to all types of music and get introduced to new artists. But the fact that I can't listen to the song I want to without buying the premium service is extremely annoying. If you want to ask that serves as customizable radio for yourself this is the one for you.	
add feature	shuffle	It's a good application. When I'm searching for peace by listening song I can find it here but I think it needs some improvements... such as shuffle on/off, playlist change, and many more.	
bad app	shuffle	Normally would've given this app 5 stars but I didn't because of the following reason - Apps are supposed to be better than the web version but not with this app. The shuffle option is very frustrating to deal with when you just want to listen to one song on mobile. You'll have to go through multiple songs just to listen to the one song you wanted to listen to. What doesn't make sense is why I don't have this issue on my tablet but I do on my phone. Can't loop either. Please fix this issue.	
premium too expensive	shuffle	It's a good app, but I don't like how you have to get premium to unshuffle your playlist.	
software problem	shuffle	Still buggy but functional. I still see bugs that are really confusing and frustrating. Beyond that, it's alright. Shuffle doesn't work properly. Will improve rating with further bug fixes and shuffle improvement	
software problem	shuffle	No option to delete a song on an album. No option to download one track on an album and no option to shuffle all your music library without creating a playlist or liking ALL your music.	
software problem	shuffle	Great song selection, amazing audio quality. However I have problems everyday with casting to Google home, connection issues, and I lose control of the volume. I need to open the app to be able to change the volume which is an inconvenience. I also think there should be an option to 'shuffle all songs' rather than having to put them all into a playlist, or 'like' every single song which is very time consuming. Making playlists could be easier too, selecting multiple albums at once for example.	
unwanted feature	shuffle	Every time I play a playlist or press shuffle on a playlist. It gives me some random song I haven't heard of before or even want to hear. For example I was playing a star wars playlist and out of nowhere after the first song. It went to someone like drake	
unwanted feature	shuffle	It is a great app but I has a skip limit time now and it does not have the shuffle button anymore it does it automatically and if I click on a song it takes me to a different song that is not the one I chose. I will be to listen to my playlist in pieces	
software problem	skips	Same songs keep repeating	
unwanted feature	skips	I hate that I can't listen to what I want. I have to wait and listen to the whole playlist to hear song I want. I also hate limited skips and how Spotify itself puts songs on my playlists. The sound quality is really good but you have to fix something	
unwanted feature	skips	Its good but when u want to play a song, they give other songs yo listen to instead of the song and sometimes when u trying to get to the song the skips are limited. I has the same effect on the playlist I cant enjoy ur song without other songs interfering and especially adding songs u dont like to ur playlist	
software problem	skip	Music is stopping out of no where n I'm starting to get more annoyed about it	
software problem	skip	A great resource for music and podcasts, BUT constantly deciding to randomly stop or start, podcasts are a pain to stream - need to have a new episodes feed that works. I'm paying for this! You need a widget that works, and to fix all the issues with Android auto.	
software problem	skip	Randomly stops playing and doesn't show the controls at the top bar. Very glitchy in the last year	
software problem	stop	Has been bugging out recently. Won't show what I'm playing, will randomly stop, isn't keeping track of playlists	
add feature	FALSE	Please change back the old media story design, the new bold font design is so ugly. At least let us choose what design we want when sharing to insta story.	
bad app	FALSE	No super awesome on android	
bad app	FALSE	Very hard to use compared to other platforms	
good review	FALSE	Easy to use enable and entertainable	
software problem	FALSE	I'm having the same issues as some of the last reviews. Spotify keeps pausing 3-4 times a song. It's very frustrating and I've starting using another service. Hopefully they can get this problem resolved asap.	
software problem	FALSE	Songs are again play after complete and need to give next track manual	
software problem	FALSE	Usually works fine, but now it keeps closing as soon as I open it. I've tried reinstalling it and restarting my phone, but it won't open.	
software problem	FALSE	Queue does not work, it seems it only queues the last song you added to the queue.	
software problem	FALSE	Ever time I try to listen to a certain song it always play something different.	
software problem	FALSE	The listening experience is great but I cannot search for any new song/artist as I am stuck with 'No internet connection available' on a high speed WiFi connection. Tried every hack available on the internet to no avail. I'm a Premium member FYI.	
unwanted feature	FALSE	Just let me view the creators songs not recommended songs. It's so annoying.	
unwanted feature	FALSE	Why dose the go from playing liked songs to songs that you haven't even looked at that's what it's getting three stars	
unwanted feature	FALSE	I am a die hard spotify fan, but with the new update I can't use current songs playing and the songs just keep going until I forcibly close it. Kinda sucks.	
unwanted feature	FALSE	Every time I want to listen to my fave songs I can listen to a few but after like 5 songs it changes to a totally other song	
unwanted feature	FALSE	It's not that bad but why can't I just directly play the song I pressed on?	
unwanted feature	FALSE	In my opinion the add more songs feature is really unhelpful no matter how many playlists I make it recommends the same songs over and over and I don't even kind them and the genres they recommend are completely unrelated to what I listen to. I think they should add a feature where u can dislike a song or hide it, so it doesn't get recommended to u again, but where u can still search it up or view it in a folder just in case	
unwanted feature	FALSE	Or was good until they started musically profiling me using radio wave brainwave frequency mindhacking devices. Now, all if the lyrics are different than the artist's and it's nerve wracking.
